BS 2021 1-3 SEPT BRUGES

**Organizing Committee**

Lieve Helsen (Chair)
Wim Boydens (Co-Chair)
Jelle Laverge (Scientific Chair)
Dirk Saelens (Scientific Chair)
Friedl Decock (Futures Chair)
Elisa Van Kenhove (Futures Chair)

**Executive Scientific Committee**

Ian Beausoleil-Morrison, Canada
Wim Boydens, Belgium
Vincenzo Corrado, Italy
Dru Crawley, USA
Pieter de Wilde, UK
Joseph Deringer, USA
Philip Haves, USA
Jan Hensen, The Netherlands
Christina Hopfe, Austria
Erik Kolderup, USA
Roberto Lamberts, Brazil
Ardeshir Mahdavi, Austria
Dirk Müller, Germany
Yiqun Pan, China
Cheol-Soo Park, South Korea
Wim Plokker, The Netherlands
Yoshiyuki Shimoda, Japan
Veronica Soebarto, Australia
Paul Strachan, UK
Christoph van Treeck, Germany
Michael Wetter, USA
Monika Woloszyn, France
Jelena Srebric, USA
Da Yan, USA

**ISBN 978-1-7750520-2-9**
**ISSN 2522-2708**

# List of topics

| | |
|---|---|
| Buildings paving the way for the energy transition | 1 |
| Climate change and bioclimatic design | 688 |
| Ensuring high quality building simulations | 1028 |
| Historical and heritage buildings | 2317 |
| Improving indoor environmental quality | 2353 |
| Practice and industry related case studies | 2938 |
| The role of occupants | 3409 |

# List of papers

Buildings paving the way for the energy transition 1
Paper ID 30141
Modelica-json: Transforming energy models to digitize the control delivery process 1
Paper ID 30142
Modeling and simulation of the Ukrainian residential building stock : application to the evaluation of gas demand 9
Paper ID 30143
Time-based economic hierarchical model predictive control of all-electric energy systems in non-residential buildings 17
Paper ID 30159
Further development and validation of the "PROFet" energy demand load profiles estimator 25
Paper ID 30169
Geometrical interoperability of 3D CityGML building models for urban energy use cases 33
Paper ID 30173
Alternative modelling approaches to energy performance certificates 41
Paper ID 30180
Validated combined first and last year borefield sizing methodology. 49
Paper ID 30189
Economic and emission reduction potential of renewable based energy systems in an apartment building in cold climatic conditions 56
Paper ID 30194
Energy performance of ETICS integrated with flexible photovoltaic panel 64
Paper ID 30200
Performance comparison of static and adjustable photovoltaic panels 72
Paper ID 30202
Energy and environmental assessment of urban areas: an integrated approach for urban planning 77
Paper ID 30219
Co-simulation approach to evaluate MPC strategies for all-air systems: case study 86

Paper ID 30222
Simulation based evaluation of building integrated solar envelope systems on building level 94
Paper ID 30266
PCM-enhanced building envelope for improved thermal comfort and energy efficiency in danish buildings 102
Paper ID 30309
Effect of introducing hybrid power system for housing 110
Paper ID 30319
Prediction of HVAC loads at different spatial resolutions and buildings using deep learning models 112
Paper ID 30334
Analysis of HVAC retrofit layouts including solar cooling system with adsorption heat pump - Modelling, dynamic simulation and multi-criteria evaluation 120
Paper ID 30346
Comparing Machine Learning based Methods to standard Regression Methods for MPC on a virtual Testbed 127
Paper ID 30347
Analysis of step-by-step individual roadmaps – what can we learn about the practice? 135
Paper ID 30350
Methodology for comparison of nZEB ambition level in different countries by building and system simulation 143
Paper ID 30351
Simulation-based analysis of the load-shifting potential of Heat Pumps in Multi-Family Houses using co-simulation 151
Paper ID 30375
Evaluating the regional implications of income-aware building stock retrofit strategies through constrained multi-objective optimization 159
Paper ID 30378
Energy Flexibility of Clusters of Buildings: development of an assessment tool 167
Paper ID 30380
An Open-AI gym environment for the Building Optimization Testing (BOPTEST) framework 175
Paper ID 30391
Impact of implementing air-conditioning systems on the school building stock in Brazil considering climate change effects: a bottom-up benchmarking 183
Paper ID 30405
Study of optimal control strategies for an energy production system using thermal mass of buildings 191
Paper ID 30411
The influence of uncertainties in grid electricity primary energy conversion factors on multi-criteria trade-off solutions in façade design optimisation 199
Paper ID 30418
Borehole latent energy storage system integrated with solar thermal collectors and heat pumps 207
Paper ID 30420
A machine learning-based methodology for harnessing the energy flexibility potential of residential buildings 215
Paper ID 30423
A collective heat and cold distribution system with decentralized booster heat pumps: a sizing study. 223
Paper ID 30432
Advanced Control of Dynamic Facades and HVAC with Reinforcement Learning based on standardized co-Simulation 231

Paper ID 30448
Operational control of earth-to-air heat exchanger using reinforcement learning 239
Paper ID 30475
Development of an urban sewage state prediction model and case studies for the evaluation of sewage heat utilization potential 247
Paper ID 30481
LSTM hourly solar irradiance prediction using local measurements and weather forecasts 255
Paper ID 30519
Investigating the control strategies for Breathing Walls during summer: a dynamic simulation study 261
Paper ID 30523
Seasonal performance and potential of heat pumps in Catalonia 269
Paper ID 30530
Development of the hybridGEOTABS design methodology for feasibility study and pre-design 277
Paper ID 30531
Development of life-cycle based strategies towards buildings with a positive ecological footprint using thermal building simulations 285
Paper ID 30539
To be or not to be a hybridGEOTABS: energy performance of hybridGEOTABS buildings in the EU 293
Paper ID 30566
Analysis of the impact of predictive models on the quality of the Model Predictive Control for an experimental building 302
Paper ID 30569
Evaluating data-driven building stock heat demand forecasting models for energy optimization 310
Paper ID 30574
Formulation and implementation of a model predictive control (MPC) strategy for a PCM-driven building ventilation cooling system 318
Paper ID 30597
Evaluation and test operation of different model predictive control approaches for an energy system 326
Paper ID 30603
Renovating Flanders: a building classification approach to assess large-scale renovation costs 334
Paper ID 30604
Aperture-based daylight modelling: Evaluating the airmass refinement for the sunlight beam index 342
Paper ID 30608
Facility location problem in thermal network design 350
Paper ID 30614
Thermal inertia analysis of family house heating system: towards higher energy flexibility 358
Paper ID 30615
Building services engineering concept to create plus energy industrial hall buildings 366
Paper ID 30616
Application of optimisation, building energy simulation and life cycle assessment to the design of an urban building construction project. 374
Paper ID 30617
Distribution of potential savings from urban-scale energy modeling of a utility 382
Paper ID 30619
LCA optimal sizing of smart buildings' energy system components considering flexible LCA-grid-footprints 391

Paper ID 30647
Retrofit of a 1970's apartment building into energy plus, results of a prototype apartment 399
Paper ID 30653
End-use disaggregation in commercial buildings with the building automation system trend data 401
Paper ID 30666
Control of a state-wide pool of hybrid heat pumps to decrease the GHG emissions of heating 409
Paper ID 30674
Measurement of hourly urban albedo of building façades with different reflective directional characteristics by a simple urban model 417
Paper ID 30692
Development and analysis of a metric to manage overheating risks in residential energy codes 423
Paper ID 30693
District heating: a practical solution for reducing fossil fuel dependency in Quebec's remote communities 431
Paper ID 30701
Bayesian approach to accounting for uncertain heating system efficiency in co-heating tests 439
Paper ID 30704
Quantifying the effect of multiple demand response actions on electricity demand and building services via surrogate modeling 447
Paper ID 30721
Open and Reproducible Use Cases for Energy (ORUCE) methodology in systems design and operation: a dwelling photovoltaic self-consumption example. 455
Paper ID 30722
Multi-criteria optimization of an earth-air heat exchanger based system for several climates of European capital cities. 463
Paper ID 30723
Robust optimal identification and scheduling of modernization measures for typical buildings 471
Paper ID 30724
Dynamic simulation of a radiant ceiling panel incorporating PCMs for building cooling and heating applications 479
Paper ID 30733
Predicting the effects of building energy conservation policies: Modeling decision-making of building owners and tenants to maximize their own profits 487
Paper ID 30735
CNN vs. DNN: comparing the two neural networks performance in predicting building operational energy with respect to the building shape 495
Paper ID 30740
Comparison of data-driven model-based and model-free control approaches for unlocking building energy flexibility 503
Paper ID 30770
Efficiency of a heated air curtain under cross-jet temperature gradients 511
Paper ID 30774
Large-scale multicriteria sorting for the integration of photovoltaic systems in the urban environment 518
Paper ID 30789
Revealing the hidden dynamics of the energy signature model 526
Paper ID 30792
Cooling energy use reduction in private residential buildings in Egypt accounting for global warming effects. 533

Paper ID 30820
Experimental tests on the optimal management of all-electric dwellings 541
Paper ID 30835
Optimizing price-informed operation of a battery storage system in an office building 548
Paper ID 30836
Multi-response optimization of a hybrid solar gas heating system based on the response surface method 556
Paper ID 30848
A critical review and cost-benefit analysis of green roofs in the United States: an optimization-based energy performance simulation study 564
Paper ID 30880
An evaluation of the proposed framework to introduce a smart readiness indicator for buildings 573
Paper ID 30901
MILP based approach for the preliminary investigation of thermal networks in urban areas 581
Paper ID 30903
Can Archive Film Stores in the global South achieve net zero and reliable Energy? 589
Paper ID 30916
Evaluating cost-effective retrofit at the stock level; the case of Orkney Islands 597
Paper ID 30971
Optimal operation of distributed energy systems - a game theory based approach 605
Paper ID 30978
MUSEGRIDS tool: energy performance calculation based on EPBD standards for EU and abroad 613
Paper ID 31003
Predicted energy savings by adopting novel radiant cooling systems in combination with natural ventilation 621
Paper ID 31030
A critical review of the effectiveness of the Sustainability Tracking, Assessment & Rating System (STARS) framework on campus sustainability 629
Paper ID 31103
Global sensitivity analysis of a bottom-up building stock energy model 636
Paper ID 31111
Model predictive control framework for operation of smart sustainable buildings 644
Paper ID 31127
Data-driven estimation of parametric uncertainty of reduced order RC models for building climate control 653
Paper ID 31130
Demonstration of operation of anti-Legionella controller in test setup 661
Paper ID 31133
Is your building automation and control system properly designed and installed? 669
Paper ID 31137
Heat zoning- and district heating simulation tool 671
Paper ID 31141
Activation of the building thermal mass to store PV surplus energy 673
Paper ID 31144
The path towards a zero fossil fuel Building 680
Paper ID 31154
The energy master planning process for districts 682
Paper ID 31155
Case study of an NZEB (renovation) with 7 years measurement data – what can a designer learn from it? 685
Climate change and bioclimatic design 688

Paper ID 30112
Performance simulation of a geothermal rain water tank coupled to building ventilation 688
Paper ID 30116
Integrated design of refrigerant, heat pump and system components: Process intensification for optimized heat pump systems 696
Paper ID 30125
Climate change sensitive overheating assessment in dwellings: a case study in Belgium 704
Paper ID 30144
Dynamic life cycle assessment of electricity demand of buildings with storage systems – potential for environmental impact mitigation 711
Paper ID 30188
The impact of a high-end climate change scenario on the energy consumption of a Flemish office building 719
Paper ID 30196
Building Performance Simulation to support tree planting for cooling need reduction: a machine learning approach 721
Paper ID 30221
Exploring easy-implementable adaptation strategies to climate change scenarios of existing office buildings: a case study in the Swiss context 729
Paper ID 30234
Impacts of climate change on mechanical ventilative cooling in high-rise buildings 737
Paper ID 30279
Development of an urban microclimate model to assess the air temperature field during the summer period 744
Paper ID 30305
Simulation of outdoor thermal conditions of sub-urban neighbourhood typology in Ha Tinh, Viet Nam 752
Paper ID 30315
Generating future-urban weather files for building performance simulations: case studies in London 760
Paper ID 30360
An integrated approach to quantify the potential local climate mitigation of a district energy network compared to individual air conditioning systems. 768
Paper ID 30395
The effect of climate change on the renovation of social housing 776
Paper ID 30462
Projecting impacts of uncertain climate change on future energy demand 782
Paper ID 30490
Simulations beyond the building, identifying climate adaptation scale jumping potentials to district and city level. Research by design for the city of Monterotondo (Italy) 790
Paper ID 30622
Life cycle efficiency of solar shading systems: a proof-of-concept 797
Paper ID 30627
Building thermal simulation-based climate classification of India 805
Paper ID 30651
Annual simulation of outdoor thermal comfort with TRNSYS 812
Paper ID 30691
Evaluation of daylighting strategies based on their embodied carbon emissions: a first methodological framework and case study 820
Paper ID 30718
Adapting French buildings to future climate: Passive design optimisation 828

Paper ID 30730
Application of solar energy in the development of university buildings energetic sustainability 836
Paper ID 30762
A modeling framework for building-integrated biotic Carbon Sequestration (CS) techniques: Towards mitigating climate change 844
Paper ID 30765
Assessment of a weather-based climate classification with building energy simulation 853
Paper ID 30769
The impact of climate change on the reliable optimization for energy and economic refurbishment of a residential building in Italy 861
Paper ID 30772
Assessing the relevance of updated climate files in the simulation of residential buildings located in semi-arid regions 870
Paper ID 30781
Spatio-temporal data analysis for development of microclimate prediction models 878
Paper ID 30782
Development of the thermal performance index for office building envelope in Asian hot-humid climate zones considering global warming 886
Paper ID 30790
Extreme weather data in building performance simulation 894
Paper ID 30796
Predicting solar radiation with Artificial Neural Network based on urban geometrical classification 902
Paper ID 30811
The feasibility of ventilative cooling in an office building in a Flemish urban context and the impact of future climate scenario's 910
Paper ID 30845
Climate change impact on the future performance of Nearly Zero Energy buildings: A case study base analysis 918
Paper ID 30851
Modeling the impact of Climate Change on Future Heating Demand in Different Types of Buildings in the Belgian residential building stock 925
Paper ID 30862
A bootstrap method to investigate the variability of overheating risk against the future climate uncertainty in dwellings 933
Paper ID 30872
Evaluating and improving outdoor thermal comfort using surrogate modeling and optimization techniques 941
Paper ID 30930
Solutions for efficient and environmental friendly cooling of data centers 949
Paper ID 31008
Urban heat islands in future climate scenarios 957
Paper ID 31015
Discrepancies in dynamic daylight simulations in the tropic associated with the differences between measured and weather files solar radiation 965
Paper ID 31024
Analysis of multiple building overheating assessment metrics for long-term indoor thermal patterns in 12 Canadian cities 973
Paper ID 31046
Building performance simulation as a guide to design decision making: an analysis of architecture students' design process. 981
Paper ID 31052
Dynamic thermal performance of structurally optimized concrete floor slabs 989

Paper ID 31070
Simulation and visualization framework for selecting appropriate urban-scale climate mitigation and adaptation strategies 997
Paper ID 31075
Physiological modeling of thermal responses of the elderly under heat-stressful conditions 1005
Paper ID 31124
Simulation of the local urban climate and its mitigation during heat waves 1013
Paper ID 31125
Urban climate simulation: coupling of mesoscale meteorological model with building-resolved neighborhood CFD simulation 1020
Paper ID 31153
Development of a new decision tool for Sustainable COOLing Systems (CORNET SCOOLS) 1026
Ensuring high quality building simulations 1028
Paper ID 30111
Using a large floorplan dataset to study the impact of simulation zoning simplifications 1028
Paper ID 30130
Consistency in early simulation inputs with statistical analyses of historical models: Reducing the impact of mental models and simulation settings 1036
Paper ID 30133
A practical approach for modelling PV off-grid systems in EnergyPlus using post-processing of data to identify black out days 1044
Paper ID 30145
Natural ventilation simulation for application to environmental planning in early design stage 1052
Paper ID 30146
Heat and moisture transport through a living wall system designated for greywater treatment 1060
Paper ID 30153
Application of MyBEM, a BIM to BEM platform, to a building renovation concept with solar harvesting technologies 1068
Paper ID 30155
Modeling and simulation of district heating and cooling systems using CityBES 1077
Paper ID 30156
Automatic generation of second level space boundary geometry from IFC models 1083
Paper ID 30162
Identifying grey-box models from archetypes of apartment block buildings 1091
Paper ID 30165
Wind-driven air flow modelling in Modelica: verification and implementation in the IDEAS library 1099
Paper ID 30174
Simulating thermal resilience of buildings and their influence by urban microclimate using EnergyPlus 1107
Paper ID 30177
GIS-based multi-scale residential building energy modeling using a data-driven approach 1115
Paper ID 30178
Assessing the effect of network order on epistemic uncertainty quantification for reduced-order grey-box energy models 1123
Paper ID 30183
On the reliability of room acoustics simulation models: A case study of multi-purpose performance halls 1131

Paper ID 30184
Collecting data for urban building energy modelling by remote sensing and machine learning 1139
Paper ID 30191
Investigation of the temperature-dependent conductivity towards improving energy performance of building 1147
Paper ID 30193
Comparison of different clustering approaches on different databases of smart meter data 1155
Paper ID 30197
Optical and calorimetric product data in Building Information Modelling 1163
Paper ID 30199
Integrating thermal, energy, lighting, and acoustics in building design approach: Lesson learned from students assignments 1171
Paper ID 30201
Proposed integration of utilities in the Energy ADE 2.0 1179
Paper ID 30203
Improving the Reliability of theoretical approaches for hygrothermal characterization and modeling of building envelopes 1187
Paper ID 30208
Easy-to-implement simulation strategies for annual glare risk assessment based on the European Daylighting Standard 1195
Paper ID 30210
Evaluating the impact of neighbouring structures on a high-rise residential block's performance 1203
Paper ID 30214
Influence of internal control simplifications in heat pump system modelling for energy flexibility evaluations 1212
Paper ID 30215
Evaluating the Performance of different Window Opening Styles for single-sided buoyancy-driven natural Ventilation using CFD Simulations 1220
Paper ID 30226
Summer passive strategies assessment based on calibrated building model using on site measurement data 1228
Paper ID 30227
Simulation of outdoor thermal comfort: a tweak with energyplus 1236
Paper ID 30228
BIM2SIM - Development of semi-automated methods for the generation of simulation models using Building Information Modeling 1244
Paper ID 30229
A spectral model for longwave radiant heat transfer: influence of new generation polymers in BES 1246
Paper ID 30230
Spatial distribution of thermal comfort: a case study in Paris' station 1254
Paper ID 30235
A machine-learning framework for daylight and visual comfort assessment in early design stages 1262
Paper ID 30236
Disaggregation of digital meter data for synthetic load profile generation 1271
Paper ID 30240
Reducing heat island effect: a mathematical model of green roof design 1279
Paper ID 30243
Passive envelope design optimization of residential buildings using NSGA-II in different Algerian climatic zones 1287

Paper ID 30245
Data-driven statistical modelling of real energy use in modern Flemish single-family houses: a feasibility study 1295
Paper ID 30246
Uncertainty analysis of building energy analysis based on replicated Latin Hypercube sampling 1303
Paper ID 30250
CNN-based quick energy prediction model using image analysis for shape information 1311
Paper ID 30252
Developing a test framework for assessing building thermal resilience 1317
Paper ID 30259
Developments in simulation and evaluation of large-scale hot water tanks and pits in renewables-based district heating 1325
Paper ID 30261
Machine learning-based framework to predict single and multiple daylighting simulation outputs using neural networks 1334
Paper ID 30272
Tree shading factor as input for thermal model through hemispherical photography 1341
Paper ID 30280
ASHRAE Standard 205P: Progress towards representation of performance data for HVAC&R equipment 1349
Paper ID 30283
Impact of modelling thermal phenomena in a high-density controlled environment agriculture (CEA-HD) space 1357
Paper ID 30287
Initial validation of the one-diode photovoltaic model for the flexible panels 1365
Paper ID 30289
Development of the City of London thermal comfort guidelines 1373
Paper ID 30290
Coupling of neural models for predicting indoor temperatures and heating loads in buildings 1381
Paper ID 30298
Optimal control of TABS using internal heat load prediction 1389
Paper ID 30304
Effectiveness of cloud cover on solar radiation prediction using artificial neural network algorithm 1397
Paper ID 30312
Development of energy use benchmark data with respect to locations, housing types, gross area and construction year from household energy standing survey in Korea 1404
Paper ID 30327
Cooling demand reduction approaches for typical buildings in a future city district in mid-Sweden 1413
Paper ID 30333
Beyond normal: Guidelines on how to identify suitable model input distributions for building performance analysis 1421
Paper ID 30335
Modelling naturally ventilated double skin facade in Modelica 1429
Paper ID 30343
Design optimization of dense urban neighbourhood with computational simulation and genetic algorithm for improving outdoor thermal environment 1437
Paper ID 30345
Gh-urban: a Grasshopper plugin for employing CityGML data in dynamical building simulations and the utilization of energy Application Domain Extension 1443

Paper ID 30352
Design optioneering for the definition of technological solution of envelope using BIM 1451
Paper ID 30356
A methodology for generating a synthetic local urban climate weather profile for building energy simulations in hot arid areas 1459
Paper ID 30361
Albedo impact on the microclimate of courtyards, potential implications on the UHI. A case study in Seville, Spain. 1466
Paper ID 30363
New Standard 140 test suite: check the weather before you simulate 1474
Paper ID 30364
Semantic web ontologies for buildings objects and their performance data 1481
Paper ID 30365
Update of ASHRAE Standard 140/BESTEST thermal fabric test cases 1490
Paper ID 30371
Data-driven calibration of joint building and HVAC dynamic models using scalable Bayesian optimization 1498
Paper ID 30374
Peak extraction in daylight simulations using BSDF data 1506
Paper ID 30376
Modelling solar shadings with metallic slats for optimal daylighting. What parameters should we focus on? 1513
Paper ID 30379
Integration of probabilistic methods and parametric tools for performance-based building design decision making 1521
Paper ID 30390
Pyrano – A Python package for LiDAR-based solar irradiance simulations 1529
Paper ID 30392
Impact of multiple urban microclimates in building performance. A simulation approach to support climate-resilient building design. 1537
Paper ID 30398
Towards the integration of energy performance certificates (EPC) and simplified building performance simulations using machine learning: initial findings 1540
Paper ID 30401
A machine-learning framework for acoustic design assessment in early design stages 1548
Paper ID 30410
Evaluating different metrics for inter-model comparison of urban-scale building energy simulation time series 1556
Paper ID 30426
Energy prediction impact of the Space Level Occupancy schedule for a Primary School 1564
Paper ID 30429
Control logic and parameters in a VAV system considering unevenly distributed internal loads and damper characteristics 1572
Paper ID 30430
Definition and validation of a thermal zone model in Modelica language with Holzkirchen Twin Houses experiment 1580
Paper ID 30435
ThRend: a ray tracing module for infrared rendering of urban scenes 1588
Paper ID 30437
Integration of raytracing and CFD simulations to assess the impact of UVGI technology on the control of aerosol transmission in an occupied room 1596

Paper ID 30438
A Python library for Radiance matrix-based simulation control and EnergyPlus integration 1604
Paper ID 30440
Impact of ELA calibration methods on building energy model fidelity 1611
Paper ID 30460
Numerical prediction of dew condensation in EAHE system in summer 1619
Paper ID 30466
Development of Gray-box modeling technique for HVAC&R systems with automatic calibration process 1625
Paper ID 30468
Energy flexibility quantification with integrated heat pump, floor heating system, and thermal storage in a school building 1633
Paper ID 30470
Functional mock-up unit based generic threat injection framework for energy efficient and resilient buildings 1641
Paper ID 30486
Modelling of transparent PV windows with CFS 1649
Paper ID 30491
Selection of input variables for covering materials through sensitivity analysis based on greenhouse energy demands 1657
Paper ID 30495
CityFFD/CityBEM: Fast and high accurate urban microclimate model 1665
Paper ID 30501
Quality check of openBIM input data for thermal building simulation based on mvdXML 1671
Paper ID 30510
Development of test procedure for the evaluation of building energy simulation tools - phase III addition of subsystem test toward systematic diagnostics for HVAC system simulation- 1679
Paper ID 30512
Design and test of reduced grey-box models adapted to office buildings 1687
Paper ID 30526
Integrating energy systems into building design with Hive: Features, user survey and comparison with Ladybug and Honeybee tools 1695
Paper ID 30527
Analysis of the thermal inertia in historic buildings and related effects for retrofit strategies applied to urban energy modeling 1703
Paper ID 30535
Spectral and biological simulation methods for the design of healthy circadian lighting 1711
Paper ID 30538
Statistical methodologies for verification of building energy performance simulation 1719
Paper ID 30546
Sensitivity analysis of the UK Standard Assessment Procedure for dwellings 1727
Paper ID 30551
Optimal control of TABS by Sparse MPC 1735
Paper ID 30562
Perspectives of building simulation in Brazil: Brazilian building simulation market landscape and the applicability of ASHRAE standard 209 1742
Paper ID 30572
Real-time light simulation methodology for expedited comparison and optimization studies through agent-based photon modeling 1750
Paper ID 30573
Determination of household area and number of occupants for residential buildings 1757

based on census data and 3D CityGML building models for entire municipalities in Germany
Paper ID 30583
Validation of spectral simulation tools for the prediction of indoor daylight exposure 1765
Paper ID 30585
Dynamic modelling and comparison between transient step response of capacitive hygrometers and chilled mirrors 1773
Paper ID 30586
Cross-over analysis of building-stock modelling approaches for bottom-up engineering model 1781
Paper ID 30595
Whole building validation for simulation programs including synthetic users and heating systems: experiment and results 1789
Paper ID 30605
A convolutional neural network for the hygrothermal assessment of timber frame walls 1797
Paper ID 30610
Evaluation of existing infiltration models used in building energy simulation 1805
Paper ID 30613
Data-driven black box model of building dynamics 1810
Paper ID 30628
Solar Load modelling in OpenFOAM for indoor HVAC applications 1818
Paper ID 30634
Lumped-capacitance models to evaluate the urban cooling energy consumptions: analysis on a case-study district in the University of Padua. 1825
Paper ID 30635
Using a surrogate model to analyze the impact of geometry on energy efficiency of buildings. 1833
Paper ID 30641
The influence of envelope moisture in the building energy simulation 1841
Paper ID 30648
Development of a metamodel to assess building thermal performance for naturally ventilated residential buildings 1849
Paper ID 30658
An inquiry into the accuracy of the energy model calibration process 1857
Paper ID 30661
Methodology to Evaluate the Room ADPI through CFD Simulation 1865
Paper ID 30668
Optimal energy system sizing with independent load and weather time series. 1873
Paper ID 30672
Uncertainty analysis of life cycle assessment input parameters on city quarter level 1880
Paper ID 30685
Comparative thermal performance analysis of a shaded and non-shaded Double Skin Façade in hot arid areas. 1888
Paper ID 30686
Transfer learning based inverse modeling to identify unknown building properties 1896
Paper ID 30687
Embedded single-board controller for Double Skin Facade : a co-simulation virtual test bed 1904
Paper ID 30689
Exploring the possibility of calibrating a whole-building model from the short-term monitoring of selected reference rooms 1912
Paper ID 30698
An optimization of the switching temperature for an energy system with a double-source heat pump 1920

Paper ID 30706
A low-order semi-physical borefield model for optimal control applications 1928
Paper ID 30709
Metrics for evaluating envelope performance in next generation energy codes 1935
Paper ID 30725
A knowledge-based framework for building model performance verification 1943
Paper ID 30726
Besos: a python library that links energyplus with energy hub, optimization and machine learning tools. 1951
Paper ID 30732
Solar radiation nowcasting through advanced CNN model integrated with ResNet structure 1959
Paper ID 30753
Radiant spectral energy for simulation in the built environment 1967
Paper ID 30766
SimQuality - A novel test suite for dynamic building energy simulation tools 1975
Paper ID 30771
FMI Co-Simulation between 2D/3D component models and HVAC/control models 1983
Paper ID 30778
Dimensionality reduction for calibration of dynamic building simulation models 1991
Paper ID 30780
Evaluation of different refurbishment or improvement strategies to reduce the environmental impact of University campuses 1999
Paper ID 30786
A framework to evaluate the reliability of energy performance assessment methods using buildings databases, application to the French Residential Energy Performance Certificate 2007
Paper ID 30818
Multi-criteria robustness assessment of a sequential whole-building design optimization 2015
Paper ID 30828
3D drone-based time-lapse thermography: a case study of roof vulnerability characterization using photogrammetry and performance simulation implications 2023
Paper ID 30840
Evaluation of energy and indoor environmental performance of mechanical ventilation systems under different climatic conditions 2031
Paper ID 30841
Deteriorate: a model to simulate envelope r-value fluctuations in natural porous insulation 2039
Paper ID 30842
Evolving co-heating tests to deliver additional performance metrics and support model calibration 2047
Paper ID 30844
A parametric analysis of the impact of thermophysical, geometry and urban context features on the energy demand of a simplified building shoebox model 2055
Paper ID 30849
Interoperability between BIM and building energy modelling – a case study 2063
Paper ID 30852
Reducing the energy performance gap on building stock level using actual energy data 2070
Paper ID 30865
Where HVAC models fail - a conceptual framework for extending effective HVAC modelling into early concept design of net zero buildings 2078
Paper ID 30866
A new method for comparing long-term thermal conditions in buildings 2086

Paper ID 30869
Integrating Climate Change with Urban Building Energy Modeling: Case of A Commercial Building Stock 2094
Paper ID 30873
A sensitivity analysis to investigate UHI impact on neighborhood building energy consumption 2102
Paper ID 30874
Intelligent building envelopes energy evaluation: an integration of double-skin facades with earth-tubes 2109
Paper ID 30877
Evaluation of smart community energy performance using bottom-up energy simulation model 2117
Paper ID 30879
Deep reinforcement learning-based optimal building energy management strategies with photovoltaic systems 2125
Paper ID 30888
Automatic IFC data enrichment with space geometries for Building Energy Performance Simulations 2133
Paper ID 30899
Uncertainty analysis of a hardware in loop setup for testing building technology 2141
Paper ID 30907
Data-driven prediction of flow parameters in a ventilated cavity using high-fidelity CFD simulations 2147
Paper ID 30911
Towards more efficient modeling and simulation of Large-scale Thermal Energy Storages in future Local and District Energy Systems 2155
Paper ID 30922
Derivation of high-resolution local thermal conditions from satellite-based data 2163
Paper ID 30925
Interactions of building- / urban-, and multi-energy systems design variables 2171
Paper ID 30932
Measurement of the building envelope thermal performance in collective housings 2179
Paper ID 30943
Modeling district heating and cooling systems with URBANopt, GeoJSON to Modelica Translator, and the Modelica Buildings Library 2187
Paper ID 30959
A comparison of performance of three variance-based sensitivity analysis methods on an urban-scale building energy model 2195
Paper ID 30960
Applying sensitivity analysis to urban building energy models 2203
Paper ID 30967
Thermal bridges numerical study in building retrofitting and ground model coupling with Whole building energy software “EnergyPlus” 2211
Paper ID 30969
CFD modelling of contaminant control in designing ventilation system for an airborne infection isolation room (AIIR) 2219
Paper ID 30997
Application of a long-term MPC formulation to hybrid GEOTABS buildings 2224
Paper ID 31009
Developing an archetype building stock model for new cities in Egypt 2232
Paper ID 31012
The effect of the external driving forces modelling on the calculated building energy need through the use of dynamic simulation 2240
Paper ID 31051
Short-term forecasting of building energy consumption with deep generative learning 2248

Paper ID 31060
Meta-modelling of operation schedules of commercial buildings based on measured electricity demand data 2254
Paper ID 31068
Uncertainty in daylight simulations of algorithmically generated complex shading screens 2261
Paper ID 31069
Development and validation of radiation-coupled multimodal heat flux boundary condition for incompressible buoyant internal flows in OpenFOAM 2269
Paper ID 31086
Faster computation of g-functions used for modeling of ground heat exchangers 2276
Paper ID 31097
A framework for integrating high-resolution trees in urban energy use models 2284
Paper ID 31104
A parametric combined design and simulation tool for the optimisation of domestic hot water systems in residential care centres 2292
Paper ID 31110
Carbon-cost efficient retrofit of passive and active systems in residential buildings using genetic algorithm 2300
Paper ID 31113
Global sensitivity analysis for large scale building energy models: importance of building stock size and convergence 2307
Paper ID 31119
Open-source photovoltaic model for early building planning processes: Modeling, application and validation 2315
Historical and heritage buildings 2317
Paper ID 30268
Simulation-based Optimization of thermal Comfort in a heritage Manor House 2317
Paper ID 30339
A hybrid measurement-simulation approach to determine the reflectance map of a historic tapestry 2319
Paper ID 30341
Simulation of historical buildings: bedford cottages, devon, uk 2327
Paper ID 30578
Numerical and experimental evaluation of a granular PCM-enhanced plaster for the energy refurbishment of historic buildings 2335
Paper ID 30702
Estimation of the thermal properties using modal identification method and optimal experiment design applied to historical building walls 2343
Paper ID 31123
Living lab ‘De Schipjes’: a zero-fossil-fuel energy concept in the historic city center of Bruges 2351
Improving indoor environmental quality 2353
Paper ID 30122
Numerical study on the performance of the temperature-controlled airflow ventilation system during the movement of a patient from the operating room to the MRI room 2353
Paper ID 30123
Performance evaluation of passive hygrothermal control for houses using a thermodynamic HAM model 2360
Paper ID 30129
Contributions and challenges of the demand response ventilation strategy in a single family house under COVID-19 occupancy scenarios 2368

Paper ID 30147
Comparison of overheating risk in nearly zero energy dwelling based on three different overheating calculation methods 2374
Paper ID 30164
Hygrothermal modeling of green roof made with substrate and drainage layers of coarse recycled materials 2381
Paper ID 30182
Computational assessment of occupant-centric radiant cooling solutions 2389
Paper ID 30198
Missing data imputation for diagnostic purposes in building system : application to an office setting 2396
Paper ID 30204
Numerical investigation of a novel diffuse wall ventilation: thermal comfort and cross-infection control effectiveness 2404
Paper ID 30211
The impact of using the application of a CNN-based approach for equipment usage detection on building energy 2411
Paper ID 30212
Airflow optimization for thermal comfort and energy efficiency for room air conditioners 2419
Paper ID 30232
A gap-filling method for room temperature data based on autoencoder neural networks 2427
Paper ID 30247
The impact of glazing on thermal performance of a hotel building in Zagreb, Croatia: An early based design 2435
Paper ID 30255
Optimization workflow for the design of efficient shading control strategies 2443
Paper ID 30278
Integrated analysis of daylight and solar access building requirements and performance in urban environments in Estonia 2451
Paper ID 30353
A computational approach for checking compliance with European view and sunlight exposure criteria 2459
Paper ID 30354
Developing thermal comfort maps for naturally ventilated spaces 2467
Paper ID 30372
Investigation of the resiliency of passive and natural cooling solutions through uncertainty analysis in a NZEB residential building in Denmark 2475
Paper ID 30387
Machine learning techniques for the daylight and electric lighting performance predictions 2483
Paper ID 30393
Defining the life-cycle energy implications of informal settlement redevelopment 2491
Paper ID 30427
Assessing the impact of outdoor air pollution on natural ventilation potential in major Indian cities 2499
Paper ID 30439
High fidelity multi-objective optimization of VAV system design 2507
Paper ID 30444
Heat balance analysis of an office building with fully glazed façade in tropical and temperate climates in Brazil 2515
Paper ID 30453
Multi-objective optimisation of Indian Jaali fenestration system for visual, thermal and perceptual performance using computational methods 2523

Paper ID 30463
Evaluating the use of photobiology-driven alertness and health measures for circadian lighting design 2529
Paper ID 30474
Fine-grained measurement of the indoor built environment with robotic vacuum cleaners 2538
Paper ID 30487
Multi-objective optimization of a simplified "Jaali" screen for daylight performance 2546
Paper ID 30489
Pre-processing behavioral data and Model Calibration in a Passive House 2554
Paper ID 30494
Investigating the relationship between interpretability and performance for optimal rule-based control 2562
Paper ID 30514
Spatial evaluation of potential saturation and contrast effects of discomfort glare in an open-plan office 2570
Paper ID 30515
Impact of building thermal inertia in different climates using energy dynamic simulation through a simplified description model 2578
Paper ID 30516
Impact of 2-zone recirculation on IAQ and energy performance of a demand controlled MEV system 2586
Paper ID 30524
Phase-change materials selection: numerical study based on design of experiments. 2592
Paper ID 30528
Building performance simulation supporting typical design activities: the case of ‘Organising 2D layout' 2600
Paper ID 30537
Indoor environmental quality survey in Research Facility: a Floor-By-Floor Analysis 2606
Paper ID 30542
Implementation of an innovative hybrid low-energy cooling strategy controlled with a fuzzy logic algorithm in a dwelling: numerical and experimental approaches 2608
Paper ID 30547
Simulating the impact of ventilation on viral infection probability from aerosol transmission in enclosed spaces 2616
Paper ID 30591
Indoor environmental quality (IEQ) assessment using laser-assisted data acquisition (LADA) of building geometry 2618
Paper ID 30624
The impact of light distribution and furniture layout on meeting light exposure objectives in an office - a simulation case study 2626
Paper ID 30632
Towards safer work environments during the COVID-19 crisis: A Study of different floor plan layouts and ventilation strategies coupling open foam and airborne pathogen data for actionable, simulation-based feedback in design 2634
Paper ID 30643
Effect of selected passive cooling measures on overheating in residential buildings in Canada 2642
Paper ID 30677
Assessing the current and future risk of overheating in London’s care homes: The effect of passive ventilation 2650
Paper ID 30727
Approaches toward multi-aspect indoor-environmental performance indicators 2658
Paper ID 30729
Application of coupling of the human and clothing thermal system and 2663

computational fluids dynamics in the evaluation of energy and comfort in occupied spaces
Paper ID 30750
Designing a data-driven model predictive control framework for residential buildings 2671
Paper ID 30754
Occupant-centric control of transparent dynamic façades through an integrated co-simulation framework 2679
Paper ID 30760
A novel multi-domain model for thermal comfort which includes building indoor CO2 concentrations 2687
Paper ID 30761
The impact of glazing characteristics, orientation and wall reflectance on energy, daylighting, visual comfort and environmental performance in patient rooms 2695
Paper ID 30779
DL Abacus- A simplified simulation-based tool for daylighting performance assessment in Brazilian dwellings 2703
Paper ID 30800
Performance of aerogels as thermal insulation materials for buildings in tropical climates 2711
Paper ID 30808
Wind turbulence impact in ventilation engineering applied on buildings 2719
Paper ID 30823
A combined CFD-based genetic algorithm and human body thermoregulation model for designing the indoor thermal environment 2727
Paper ID 30826
Computational analysis of aerothermal characteristics of skygardens and comparative assessment of different attenuators 2734
Paper ID 30827
Development of a 3D and high resolution dynamic thermal model of a room with sun patch evolution for thermal comfort applications 2741
Paper ID 30855
The impact of PCM applications on thermal comfort in standardized preschool designs in 2 Brazilian climatic zones 2749
Paper ID 30858
Simulation of COVID-19 ultraviolet disinfection using coupled ray tracing and CFD 2757
Paper ID 30861
Assessing energy poverty and potential retrofit scenarios in residential stock in Albania. 2767
Paper ID 30864
Radiation control optimization for dynamic glazing in building façades in subtropical climate 2775
Paper ID 30885
Bedroom environmental discomforts, occupant behaviors, and sleep quality based on an online survey 2783
Paper ID 30886
A daily-based approach to study daylighting performance of openwork façades of classrooms in hot-humid climates: glare protection, daylight sufficiency and circadian potential. 2789
Paper ID 30926
Development of adiabatic and isotherm humidifier models to compare health, energy and water use 2797
Paper ID 30938
Case study: the influence of model size on local room acoustic parameters in Odeon 2805

Paper ID 30945
Predicting occupant thermal comfort for multiple air-side systems and seasonal scenarios using Autonomous HVAC CFD 2813
Paper ID 30951
Integration of a flexible tensile material in a second skin façade system: a passive method to enhance the energy performances of the Italian building scenario 2821
Paper ID 30974
Building meta-optimization: A study on the reuse of previous simulation data to reduce computational costs 2829
Paper ID 30980
Pre-retrofit monitoring of indoor air quality and energy use in a low-rise block of flats in the UK 2836
Paper ID 30984
Embodied facade retrofit design with augmented reality in the built environment 2844
Paper ID 30990
A simulation study to analyze the impact of Integrated Passive Strategies on natural ventilation and daylighting in a slum house of Mumbai 2852
Paper ID 31010
Improving indoor environmental quality through smart operable windows; a machine learning approach 2860
Paper ID 31040
Influence of zoned use and occupancy on Daylight Autonomy in high-rise mass housing in Colombia 2868
Paper ID 31042
Analysis of the energy performance of a new ventilated brick wall: behaviour of real scale prototype under different ventilation configuration and weather conditions 2873
Paper ID 31054
Distributed sensing for indoor environments: comparing measured and simulated indoor airflow data for complex commercial building interiors 2881
Paper ID 31084
Study of the influence of temperature on the moisture buffering capacity of bio-based concretes 2889
Paper ID 31085
Influence of interventions against spread of COVID-19 on noise levels in student restaurant 2897
Paper ID 31098
Assessing performance of passive or low-energy resilient cooling technologies for pre-1980 medium office buildings in Phoenix, Arizona and Chicago, Illinois 2903
Paper ID 31101
Lighting for circadian well-being: a simulation-based workflow for the visual and non-visual lighting design of a nursing home 2911
Paper ID 31107
Gas phase air cleaning effects on ventilation energy use and the implications of CO2 concentration as an IAQ indicator for ventilation control 2919
Paper ID 31121
Luminance distributions in consultancy: Simulations or measurements? 2927
Paper ID 31132
Optimum daylighting and thermal comfort simulation framework for school buildings in hot arid climate 2929
Practice and industry related case studies 2938
Paper ID 30117
Digital Twin Design with on-line calibration for HVAC systems in buildings 2938
Paper ID 30138
Case study of evaporative cooling technologies for Australian office buildings 2946

Paper ID 30139
Tool Development for Automatic Simulation of central and decentral Heat Supply Scenarios and Application to a district in the City of Mainz, Germany (SimStadt 2.0 project) 2953
Paper ID 30154
Ecological and economic analysis of low-temperature district heating in typical residential areas 2955
Paper ID 30161
Whole-building energy simulation analysis and optimization of residential building equipped with air-duct system in three different regions 2963
Paper ID 30176
Impact of changes in design/operation guidelines against the COVID-19 on the energy performance of an institutional building: a case study 2971
Paper ID 30218
Assessing building envelope thermal performance using in-situ measurements 2979
Paper ID 30225
Facades, roofs and solar parking yield estimation at Utrecht science park 2987
Paper ID 30242
In-situ validation of a new sizing methodology for combined production and distribution for domestic hot water and space heating 2989
Paper ID 30249
A simulation approach for the optimization of distributed energy supply systems based on multiple energy indicators in commercial districts. 2997
Paper ID 30260
Energetic self-sufficiency of a greenhouse residence: a dynamic techno-financial feasibility study 3005
Paper ID 30310
Interdisciplinary parametric modelling and modularization to improve air quality, acoustics and lighting in school buildings 3013
Paper ID 30321
Simulation support for the design of ventilated windows: a case study 3020
Paper ID 30342
Case studies for feasibility and potential estimation of demand response control of district heating and cooling system in Japan 3028
Paper ID 30355
A BIM-based Business Process Model to support LEED® certification in retrofit projects. 3036
Paper ID 30357
Improving the training efficiency of automated fault detection and diagnosis for central chilled water plants by transfer learning 3044
Paper ID 30377
Analysis of the thermal performance of a ground water storage cell with helical shaped pipe for ground source heat pumps 3052
Paper ID 30386
Achieving carbon emission reduction goals through calibrated energy modeling and parametric analyses 3060
Paper ID 30389
A methodology for applying energy renovation on public buildings 3064
Paper ID 30421
Evaluating stack effect impact of thermal comfort in high rise office towers 3072
Paper ID 30425
HVAC performance evaluation and optimization algorithms development for large buildings 3080

Paper ID 30478
A Comparative analysis on the impact of different weather datasets used in Australia on building energy simulation results 3088
Paper ID 30482
Buoyancy-driven ventilation in a real operational building: Uncertainty quantification of the discharge coefficient 3096
Paper ID 30497
Optimization of electric lighting in a hospital emergency room - A case study 3103
Paper ID 30503
End-to-end Model for Estimating Heat loss of Building envelope using Deep learning with Infrared image 3111
Paper ID 30505
Strengths of non-linear white-box MPC for building HVAC control 3119
Paper ID 30540
Developing a simplified methodology for simulating energy performance of buildings with thermally activated building systems 3121
Paper ID 30541
Texture mapping and IFC material retrievement for virtual reality applications 3129
Paper ID 30554
Interactive Sankey diagram for visualizing real-time and/or simulation-derived energy flows 3136
Paper ID 30567
Evaluating daylighting performance metrics in LEED v4 for commercial office buildings: What criteria is missing to enhance the visual performance and comfort of occupants? 3140
Paper ID 30589
Life cycle metrics of certified green school buildings' envelope shading scenarios 3148
Paper ID 30621
Calibration of a multi-residential building energy model - Part I: Cluster-based sensitivity analysis 3156
Paper ID 30626
Calibration of a multi-residential building energy model – Part II: Calibration using surrogate-based optimization 3164
Paper ID 30629
A simplified open-loop control strategy for integrated shading and lighting systems using machine learning 3172
Paper ID 30636
A performance-driven simulation workflow for PV integration into the design process: application on an innovative building project in Switzerland 3180
Paper ID 30637
A virtual test bed for evaluating advanced building automation algorithms 3188
Paper ID 30655
AI-based building type assignment 3196
Paper ID 30678
Hydrogen explosion hazards mitigation in industrial lead-acid battery rooms under different ventilation conditions 3206
Paper ID 30679
Full-scale validation of natural ventilation models in Stanford's Y2E2 building 3212
Paper ID 30683
Natural ventilation predictions for a slum house in Dhaka using large-eddy simulations within a multi-fidelity simulation framework with uncertainty quantification 3220
Paper ID 30700
Influence of the hydronic loop configuration on the energy performance of a CO2 heat pump for domestic hot water production in a multi-family building 3228

Paper ID 30703
Use of district energy modelling and stakeholder engagement in developing decarbonisation strategies 3236
Paper ID 30712
Coupling building simulation with virtual building management system for advanced test and validation 3244
Paper ID 30717
Borehole thermal energy storage integration: a case study 3252
Paper ID 30745
Exterior insulation thickness and its effect on energy usage and thermal comfort on a high-performance multi-unit residential building 3254
Paper ID 30746
Reallocation of heating consumption and costs based on decoupling of household heat metering data 3256
Paper ID 30783
Virtual reality enabled building-data management through the combination of a fully integrated IFC-BIM model and an IoT-based building management system 3262
Paper ID 30806
Energy prediction under changed demand conditions: robust machine learning models and input feature combinations 3268
Paper ID 30884
Design and analysis of a renewable energy network based on fuel cells in residential communities 3276
Paper ID 30891
The design of distributed control system for a hybrid energy supply network in a residential community 3284
Paper ID 30893
An integrated analysis of structural safety, embodied carbon, and construction cost in a prefabricated Chinese timber house within a BIM-based environment 3292
Paper ID 30910
The efforts towards development of an energy efficiency upgrade platform 3300
Paper ID 30933
Feasibility study for combined mist evaporation cooling with carbon dioxide enrichment for greenhouse cultivation 3308
Paper ID 30954
Effect of reduced air change rates on indoor air quality and air conditioning energy consumption in retail buildings 3314
Paper ID 30985
Simulation of Legionella risks when restarting a sanitary sport facility installation after a period of inactivity during COVID-19 3321
Paper ID 30995
A GIS-based regional scale analysis of urban water balance with an aquifer-based water supply 3323
Paper ID 31013
Design approach towards Photovoltaic Thermal Solar Air Heater (PVT-SAH) assisted Solid Desiccant Cooling (SDC) system in hot and humid climates 3332
Paper ID 31043
Characterised sun path patches as a way to design better shading 3340
Paper ID 31049
Reducing reliance on deterministic asset ratings to improve the operational energy performance of buildings 3342
Paper ID 31055
Using simulation, visualization and monitoring to address barriers to high-performance building strategies 3350

Paper ID 31056
Simulating gentle failure as an approach to building resiliency 3358
Paper ID 31063
Impact of landscaping elements on pedestrian wind simulations using OpenFOAM 3366
Paper ID 31080
An automated approach to Parametric Design Analysis for large-scale design projects 3372
Paper ID 31115
Daylighting simulation using spectral ray tracing 3379
Paper ID 31129
Enable building system simulation by deriving a Digital Twin for operation from 2D P&ID plans 3386
Paper ID 31131
Modeling of VOC removal in a commercial airplane hangar by multiple exhaust hoods 3389
Paper ID 31135
Development of a digital twin of the temperature distribution in datacenters 3396
Paper ID 31146
Designing a Solar Shading Solution parametrically using the direct sun and the view to the outside for a building in Vietnam 3398
Paper ID 31147
Quantification of the cost of oversizing cooling installations in a case study under construction in Vietnam 3400
Paper ID 31148
Multidisciplinary BIM-model for an integrative design approach: study case of a car dealership building in Brussels 3402
Paper ID 31150
Towards a new simulation based hybridGEOTABS design methodology! 3404
Paper ID 31156
Comparison of Heating Power calculated through standard and building simulation models 3407
The role of occupants 3409
Paper ID 30187
The impact of using actual occupancy data on building performance simulation results for a multi-purpose university building 3409
Paper ID 30205
Consequences-based graphical model for contextualized occupants' activities estimation in connected buildings 3417
Paper ID 30207
A synthetic population model for representing occupant behaviors in buildings 3425
Paper ID 30216
Mapping the gap in user-related building performance simulation models 3432
Paper ID 30238
Impact and comparison of standard-based, stochastic, and tracked user behaviour in open space offices: A Swiss case study 3440
Paper ID 30267
Impact of the UK's COVID-19 lockdown on the residential electricity consumption 3448
Paper ID 30273
Multi-Agent based simulation of human activity for building and urban scale assessment of residential load curves and energy use 3457
Paper ID 30288
How do buildings adapt to changing occupancy? A natural experiment 3465
Paper ID 30299
Smart ventilation control to minimize the infection risk with COVID-19 in office buildings 3473

Paper ID 30303
Building energy performance analysis of the application of a vision-based deep learning approach for occupancy activity detection 3483
Paper ID 30337
Spatiotemporal variation in occupant behavior: statistical analysis and application in American households 3491
Paper ID 30383
Development of synthetic ageing occupant behaviour through generative adversarial network 3498
Paper ID 30402
Finding occupant reference profiles using self-organizing maps for thermal performance assessment 3505
Paper ID 30433
Investigating thermostat setpoint preferences in Canadian households 3513
Paper ID 30434
Indoor air quality during lockdown: A monitoring-based simulation-assisted study in London 3521
Paper ID 30467
Do we supply adequate outdoor air to buildings occupancy? 3529
Paper ID 30508
The impact of occupancy patterns on artificial light energy demand - simulation and post-occupancy-evaluation 3536
Paper ID 30525
Occupant satisfaction with automation: experimental data vs. simulation 3544
Paper ID 30529
A stochastic occupancy modeling approach to enhance the energy efficiency of residential heating and cooling through occupancy sensing technology 3552
Paper ID 30571
The impact of occupancy prediction accuracy on the performance of model predictive control (MPC) in buildings 3560
Paper ID 30584
Agent architecture in building performance: a review of current methods 3568
Paper ID 30588
Contribution of building energy simulations to the assessment of overheating health risks in urban dwellings 3577
Paper ID 30590
People who? Why occupant behaviour modelling is not (yet) included in the design workflow 3585
Paper ID 30601
Predicting thermal comfort for diverse populations 3593
Paper ID 30660
Representations of people in urban building energy models 3601
Paper ID 30665
Optimal control strategies of an ice-based thermal energy storage system in an existing office building 3610
Paper ID 30744
Generating traffic-based building occupancy schedules in Chattanooga, Tennessee from a grid of traffic sensors 3616
Paper ID 30813
Indoor climate profiles in Danish apartments based on high temporal resolution measurements 3624
Paper ID 30817
Development of an interactive virtual reality simulation environment with a thermal feedback for the user 3631

Paper ID 30847
Comparative window use study: habits versus deliberative actions in residential buildings 3639
Paper ID 30868
Quantifying household specific self-consumption of photovoltaic-based power generation in energy efficient buildings – a comprehensive parametric study to increase the reliability of energy consulting 3646
Paper ID 30900
A new building thermal model to a better evaluation of the thermal comfort during heat waves 3654
Paper ID 30906
Comparison of different machine learning algorithms in predicting air conditioner operating behaviors in open-plan offices 3662
Paper ID 30940
A simulation workflow for exposure characterisation of daylit spaces based on occupant gaze orientation 3670
Paper ID 30962
Designing and experimenting nudge signals to act on the energy signature of households for implementing indirect energy flexibility 3678
Paper ID 30965
Impact of occupant behavior on performance optimized building retrofits 3686
Paper ID 30968
Methods for determining occupant behavioural models for energy-efficient retrofitting of 20th-century buildings 3694
Paper ID 30981
The formulation of a reference load curve to measure energy flexibility 3702
Paper ID 30999
How the occupancy affects the reverberation of large university halls 3704
Paper ID 31057
Investigating the correlation dynamism between WiFi connection counts and camera-based occupancy counts 3712
Paper ID 31077
Personas to understand occupant behavior and energy usage in buildings 3720
Paper ID 31106
Human in the Loop: perceived based control as the key to enhance buildings' performance 3728
