Paper ID: 1221
A GIS-based Approach to Assess Elderly liveability in Singapore and to Suggest Possible Directions for Optimization

Paper ID: 1223
Real-time thermal comfort classification using an occupants activity model from thermal images

Paper ID: 1236
Analysis of the effect of emission rate of PM2.5 with different setting forms on indoor air quality in CFD

Paper ID: 1238
Investigation on the thermal dynamic performance and thermal comfort of a PV-Trombe wall

Paper ID: 1241
A comparative study of between photographic and simulated HDR images

Paper ID: 1248
Field testing and numerical simulation of pollutants in residential kitchen ceiling make-up air method

Paper ID: 1254
Measuring the effectiveness of retrofit, behavioural and transformational adaptation solutions to heat waves

Paper ID: 1255
A hybrid simulation/real data based learning approach for building thermal comfort modeling

Paper ID: 1260
An expert decision support tool for office buildings facades during early design stages: A parametric approach

Paper ID: 1316
Simulation study on human thermal comfort by position of Kitchen vent

Paper ID: 1321
Investigation on the valid time of measured cooling-related behavioral patterns of occupants in university dormitories

Paper ID: 1322
Measurement and analysis of window opening behavior of an office building in Xi’an during summer

Paper ID: 1323
Evaluation of the influence of interior design parameters on circadian daylighting of design-studio classrooms

Paper ID: 1328
OTTO: Outline of an Occupants Theory-Tailored Ontology for building performance simulation

Paper ID: 1342
A dynamic analysis of Photosynthetically Active Radiation (PAR) availability to achieve a biophilic office building in three highly dense Chinese cities

Paper ID: 1348
Source term estimation of gaseous pollutant based on the response matrix from m-sequence pulse technique

Paper ID: 1351
Indoor air quality assessment based on particulate matter contamination

Paper ID: 1352
How real-time energy feedback influences energy-efficiency and aesthetics of architecture design and judgement of architects: two design experiments

Paper ID: 1362
Investigation of indoor thermal environment, heating and cooling behaviors at rural residential buildings in Jiangsu, China
Paper ID: 1474
Thermal comfort in low-income housing in informal settlements in Lima, Peru. Towards a localised adaptive comfort standard

Paper ID: 1477
Increasing daylight-enabled vertical eye illuminance through fenestration and layouts: A simulation study in a typical office

Paper ID: 1500
Investigation of input feature combinations considering occupant behavior for modeling indoor air temperature in a classroom

Paper ID: 1505
Optimization of outdoor thermal comfort in high-rise residential blocks based on the design of landscape-integrated wind deflector

Paper ID: 1514
A user-centered interactive optimization approach based on immersive virtual reality

Paper ID: 1518
Application of ISO/DIS 52016-3 for Dynamic Shadings in an Office Building

Paper ID: 1520
An analytical approach for evaluating the concentrations of multiple generic air contaminants in EnergyPlus simulations

Paper ID: 1541
Life cycle assessment of building reversible ground-coupled heat pump systems supported by dynamic electricity mix data

Paper ID: 1542
Activity-based synthetic framework for modelling energy demand of residential building stock

Paper ID: 1547
Informing early-stage design decisions: Comprehensive spatial and temporal analyses of outdoor thermal comfort to maximise the use of schoolyards.

Paper ID: 1554
Influences of indoor clothing adaptations on energy consumptions in rural houses

Paper ID: 1557
Urban vegetation design recommendation for improving outdoor thermal comfort in tropical and temperate climate zones

Paper ID: 1571
Integrated thermal strategies for UK non-domestic building energy demand

Paper ID: 1584
Occupant behaviour (OB) modelling to support urban building energy simulation: an overview.

Paper ID: 1593
Field testing of air change rate in university dormitories under different window-opening behaviors in Nanjing, China

Paper ID: 1601
Modeling Indoor Air Quality at the design stage

Paper ID: 1613
Research on the Greening Design of Pocket Parks Based on the Optimization of Thermal Comfort and Ecological Benefits

Paper ID: 1615
Simulating human response to actual light exposure: Comparison of room and human-centric standards

Paper ID: 1627
Visual and non-visual impacts of commercial signboards in residential areas

Paper ID: 1632
Energy performance of commercial buildings in partial-to-no-occupancy:

*Proceedings of the 18th IBPSA Conference*
*Shanghai, China, Sept. 4-6, 2023*
Paper ID: 1173
Framework for automated IFC-based thermal comfort analysis based on IFC model maturity 713

Paper ID: 1188
Performance prediction of different topology organizations in district heating systems with component-based machine learning 721

Paper ID: 1197
A cosimulation strategy based on OPENFOAM for solving thermal distribution and airflow in data center 729

Paper ID: 1213
Ecological network analysis of integrated energy systems with Modelica: A novel biomimetic approach for building design and operation 735

Paper ID: 1218
Comparison between popular Genetic Algorithm (GA)-based tool and Covariance Matrix Adaptation - Evolutionary Strategy (CMA-ES) for optimizing indoor daylight 743

Paper ID: 1226
A data-driven framework for building energy benchmarking: Time-series decomposition, clustering and change-point regression 750

Paper ID: 1227
Feasibility analysis of pod and deep autoencoder for reduced order modelling Indoor environment cfd prediction 758

Paper ID: 1231
Assessing daylight illuminance and glare risk of Polymer Dispersed Liquid Crystal (PDLC) glazing with Radiance 767

Paper ID: 1250
Validation of EnergyPlus infiltration models for a case study in a high-rise residential building 775

Paper ID: 1252
Measuring legibility of public open spaces using Deep Convolutional Neural Network: A case study in Harbin 783

Paper ID: 1258
Bridging the gap between building energy modeling and controls implementation - experiences of, and best practice for, coupled HVAC-control modeling 791

Paper ID: 1259
Quantifying the cooling demand of urban areas using aerial images 799

Paper ID: 1265
A framework for calibrating and validating an air loop dynamic model in an HVAC system in Modelica 807

Paper ID: 1266
Classification of building properties from the German census data for energy analyses purposes 816

Paper ID: 1273
Improved urban irradiation simulations using the Pyrano 2-phase model with semantic obstruction segmentation 824

Paper ID: 1278
Development of simplified chiller energy consumption simulation model using load ratio in PKPM BES module 832

Paper ID: 1290
BIM interoperability: graph neural networks as an alternative for data communication and relationship establishment in human-centric studies 838

Paper ID: 1301
Empirical validation of building energy modeling input parameters: Cooling performance curves of a direct expansion coil 845
Paper ID: 1304
Data-driven reduced order modelling using clusters of thermal dynamics 853

Paper ID: 1309
What metrics does the building energy performance community use to compare dynamic models? 861

Paper ID: 1311
Machine learning-based Sobol sensitivity analysis for building energy assessment without Monte Carlo integral 869

Paper ID: 1330
Exploring cross-project building performance prediction: creation and implementation of a zone-based surrogate model for building performance optimization 877

Paper ID: 1346
A method for selection of outdoor design conditions based on simultaneous occurrence of meteorological elements by using multivariate joint distributions 885

Paper ID: 1350
Building energy consumption and peak load reduction potential of mixed-use community through urban building energy modeling 891

Paper ID: 1355
Assessing the Potential of Open Data for Expanding the Urban Building Dataset: A case study in Huangpu District, Shanghai 899

Paper ID: 1366
A data framework enabling BEM and BMS interoperability based on semantic web technologies and Brick ontology 907

Paper ID: 1370
Phyvac: a Python module for highly flexible HVAC system simulation, and fault dataset generation as an application example 915

Paper ID: 1372
A Bayesian deep learning methodology with uncertainty quantification for harnessing the residential building heating system energy flexibility 923

Paper ID: 1378
Inverse surrogate modelling to determine thermal characteristics of buildings 931

Paper ID: 1379
Rapid prototyping of building energy system modeling for shopping centers 939

Paper ID: 1380
Low-cost photographic measurement of colour, specular reflectance, and roughness 947

Paper ID: 1386
A Review of the Fundamental Concepts of CFD for Novice Users in Building Research and Design 955

Paper ID: 1392
Semi-automated extraction of HVAC system topology from imperfect Building Information Models 963

Paper ID: 1393
Evaluating an auto decoder-based generative model for the infomorphism urban planning framework 971

Paper ID: 1394
Development of a surrogate model for interactive early-stage net-zero building design 979

Paper ID: 1395
Infomorphism: integrating a forecasting model for high-resolution urban energy demand prediction 987

Paper ID: 1398
Predicting energy consumption and thermal comfort in buildings using a hybrid machine learning and building performance simulation approach 991
A novel model reduction and calibration methodology to define lumped parameters of building thermal models

Ensemble transfer learning strategy in forecasting power consumption for residential buildings

Unsupervised estimation of residential electricity outages from aggregated meter data

Building energy modelling based on building information modelling: the remaining problems and a more robust method

Graph Convolutional Network (GCN) for predicting multizone airflow path

A novel framework for Bayesian calibration of building energy models with sub-hourly building operational data

Environment for pre-simulation characterization of energy models through set analysis

A novel rooftop solar energy potential estimation method based on deep learning at district level

Clustering analysis of IAQ patterns and characteristics in a university dormitory

Developing teaching in urban building energy modelling

Study on the performance of fractional-step methods for unsteady ventilation simulations

3D printing path optimization strategy based on Dijkstra's algorithm -- The contour slicing method with Eulerian loop optimization as an example

Investigating the relationship between energy assessor training and assessment methodology in standardised energy assessments in Europe

Pathway toward prior knowledge-integrated machine learning in engineering

Investigating the “whole-life performance” of representative profile extraction for microgrid planning

Developing a Framework for Automated Modelling of BIPV

Identification of room occupancy and activity based on Gaussian Mixture Modeling of HEMS data

A Conditional Generative Adversarial Networks (CGAN) model for indoor wind field images prediction

Energy modelling and forecasting for an underground agricultural farm using a higher order dynamic mode decomposition approach
HVAC systems performance modeling using component-based machine learning
Paper ID: 1531

Large-scale data-driven predictive control of AHU and RTU systems for New York State in winter
Paper ID: 1548

Physical informed graph convolutional networks for fast simulation of thermal bridges in building structures
Paper ID: 1553

Coordinate descent-based model calibration methodology for HVAC subsystems
Paper ID: 1561

A Machine Learning Model for the Prediction of Building Hourly Heating Demand from CityGML Files: Training Workflow and Deployment as an API
Paper ID: 1570

Development of a Directed Acyclic Graph through expert elicitation for Causal Inference in Built Environment Research.
Paper ID: 1588

Implementation and demonstration of an automated energy modeling framework for scalable and adaptable building digital twins based on the SAREF ontology
Paper ID: 1595

How does different collected data influence data-driven chiller model – Analysis of collected data distribution using causal discovery method
Paper ID: 1621

Leveraging simulation data to predict thermal comfort using reduce order modelling
Paper ID: 1628

Building performance simulation of Advanced Building Envelope (ABE): towards a python-based open-source library to support co-simulation for design and operations
Paper ID: 1650

Energy demand uncertainty analysis based on a probabilistic building characteristics approach
Paper ID: 1670

PALM-4U GUI: A cloud based user-friendly graphical user interface for the urban climate model PALM-4U
Paper ID: 1673

A data-driven framework for modelling community energy demand
Paper ID: 1679

Dynax: a differentiable dynamic energy simulator for inverse inference, optimal control and end-to-end learning
Paper ID: 1680

A validated high-fidelity simulator for an ultra-efficient office building based on coupled EnergyPlus-Modelica models
Paper ID: 1689

A deep learning accelerator framework for large eddy simulation in the built environment
Paper ID: 1702

The parallel modification of state space method for enhancing building thermal process simulation
Paper ID: 1715

Development of a calibrated zonal model for airflow and temperature distribution prediction
Paper ID: 1720

Proceedings of the 18th IBPSA Conference
Shanghai, China, Sept. 4-6, 2023
Proceedings of the 18th IBPSA Conference
Shanghai, China, Sept. 4-6, 2023

Paper ID: 1726
Development and application of brick schema based multi-sources data integration for smart building energy management 1288

Paper ID: 1727
Automatic generation of RC models using IoT data from commercial buildings 1293

Paper ID: 1735
A novel 3D-geographic information system and deep learning integrated approach for high-accuracy building rooftop solar energy potential characterization of high-density cities 1298

Performance-driven design 1306

Paper ID: 1109
Parametric simulation for urban street design to improve outdoor thermal comfort and building energy efficiency: case studies in tropical and subtropical cities 1306

Paper ID: 1113
Thermal fluxes and solar energy storage in a massive brick wall in natural conditions, year-round simulation 1313

Paper ID: 1117
Thermal Performance and Characterization of a Sawdust ‐raw Earth Material for Building Application and Behavior 1321

Paper ID: 1118
Scalable performance assessment of a chiller in existing buildings with different thermal dynamics 1327

Paper ID: 1124
Intelligent simulation: fast deep multi-fidelity surrogate models to assess building green performances at the early design stage 1335

Paper ID: 1128
On the choice of the weather dataset in hygrothermal simulations in Mediterranean climate: MRY vs TWY 1344

Paper ID: 1129
Moisture storage and water uptake experimental data for three-layer and five-layer CLT specimens 1352

Paper ID: 1141
A genetic-algorithm-based framework for assessing the performance of shading strategies 1360

Paper ID: 1143
Enhanced evaluation of ground-coupled heat pump operation 1368

Paper ID: 1147
Design and optimization of a novel dual source heat pump unit in a nearly-zero energy building 1376

Paper ID: 1149
Energy performance of thermochromic smart windows in office buildings in different climate zones 1384

Paper ID: 1153
Impact of pore network parameters on hygric properties of porous materials 1392

Paper ID: 1157
Comparing dynamic statistical models on simulated monitoring data to co-heating test results for estimating the Heat Loss Coefficient 1400

Paper ID: 1158
Life cycle-based comparison of office buildings in timber and concrete construction with special consideration of thermal masses using building simulation 1408
| Paper ID: 1161 | A new fast dynamic Smagorinsky model using artificial neural network for simulation of outdoor airflow and pollutant dispersion | 1416 |
| Paper ID: 1162 | Automation of Life Cycle Assessments for large-scale building refurbishments | 1423 |
| Paper ID: 1174 | Daylight, glare, and view: Multi-objective design workflow for open workplace | 1431 |
| Paper ID: 1176 | Causality-based model for decision-making of building energy retrofit | 1439 |
| Paper ID: 1177 | Study on renovation strategy of natural ventilation based on manual opening of windows | 1445 |
| Paper ID: 1181 | How does building shape affect carbon neutrality in the early design stage? | 1452 |
| Paper ID: 1183 | The design and optimization of a novel heating tower compound ground source heat pump heat storage system | 1460 |
| Paper ID: 1190 | Daylighting design optimization of symmetrical bilateral openings with internal blinds in tropical classrooms using RBFOpt algorithm | 1468 |
| Paper ID: 1208 | Numerical analysis of wind effects on mechanically induced depressurization for asbestos abatement | 1476 |
| Paper ID: 1212 | Prediction of daylighting performance using machine learning algorithm based on radiance simulated data | 1482 |
| Paper ID: 1215 | Simulation study on how geometric factors influence the flow coefficient of perforated plate | 1489 |
| Paper ID: 1217 | Collaborative approach to design: case-study of future-proofing a Paragraph 80 house | 1497 |
| Paper ID: 1219 | Developing an advanced daylight model for a shading system with conditional generative adversarial network (cGAN) | 1505 |
| Paper ID: 1229 | A performance-based acoustical design strategy for centralized air distribution networks | 1513 |
| Paper ID: 1232 | Building simulation analysis using a 60-year historical weather series in Brasília/Brazil: How has the changing climate impacted the thermal performance of social housing? | 1522 |
| Paper ID: 1235 | Effectiveness extrapolation of rotary energy exchangers and its impact on energy simulation | 1530 |
| Paper ID: 1237 | Passive design multi-objective optimization for high-performance tropical office buildings: Comparison of four different decision-making algorithms | 1538 |
| Paper ID: 1239 | Investigation on heat-flow and energy consumption by solar shielding at the openings | 1546 |
Paper ID: 1242
Numerical investigation of the heat transfer in realistic rooms with a two-panel radiator

Paper ID: 1245
Aerosol concentration and airflow distribution assessment in a multi-zone indoor space with mechanical ventilation: field measurements and CFD simulations

Paper ID: 1247

Paper ID: 1251
Analysis of energy flexibility of an efficient positive energy apartment building in a Nordic climate by thermal mass activation

Paper ID: 1264
CFD simulation for opaque ventilated facades in hot arid climate based on literature review design parameters.

Paper ID: 1268
The impact of urban layouts on indoor thermal condition: a comparative study between traditional and contemporary urban blocks in hot arid climate

Paper ID: 1272
A critical analysis of future weather data for building and energy modeling

Paper ID: 1275
GNNs based method for evaluating HVAC terminal piping layout solutions in office buildings

Paper ID: 1276
High thermal performance phase-change material integrated bamboo wall

Paper ID: 1294
Image-based residential building sunlight inspection using step-wise deep learning models

Paper ID: 1297
Multi-objective design and performance analysis of renewable energy cogeneration systems considering the effects of climatic conditions

Paper ID: 1300
Machine learning techniques and 3D GIS building model for accurate solar radiation prediction on building facades in mountainous and urban regions

Paper ID: 1306
Computational Fluid Dynamics (CFD) based spatial mapping of indoor air quality and thermal comfort in the indoor environment

Paper ID: 1307
Multi-performance method for urban densification

Paper ID: 1308
A parametric approach to evaluate the impact of BIPV facades on outdoor thermal comfort in different urban contexts

Paper ID: 1310
Dynamic drivers of building Carbon emissions

Paper ID: 1312
A holistic view of solutions in social housing in São Paulo - Brazil: CO2 emissions, performance, and cost of roof compositions

Paper ID: 1314
Numerical simulation and optimal design of micro-climate of shelter parts of air conditioning outer unit

Paper ID: 1318
EUI benchmarks for net-zero energy buildings in India

Proceedings of the 18th IBPSA Conference
